a. Check if you're able to re-launch SEB correctly, and exit properly. In that case, the issue may be fixed. If not - continue with the following steps:

b. Open the Registry Editor:
   Either press Winkey+R or go to Start and Run.
   Type “regedit” and press Enter.

![Image of Registry Editor with regedit command](image)

(c) Navigate to: HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Policies\System

(If “System” key is not there, you’ll need to create it yourself: click with the right key on “Policies”, Choose “New”, “Key”, name the New Key - System )

d. On the central area of the Registry Editor, you should find an item named “DisableTaskMgr”. If it’s not there, create it by clicking “System” with the right
key. Choose “New”, “DWORD”. A new item will be created, name it “DisableTaskMgr”.

Now double-click “DisableTaskMgr”. A new window will pop-up. Make sure “Value data” is set to 0.

Close the Registry Editor, and give Task Manager another try.

Still not working -> Try restarting your computer and hopefully the issue will be resolved.
